HEHO

HECLOM

HENOM

HEA4

CHARACTERISTICS

- Functioning by deformation
- European approval for structural applications in non cracked concrete
- European approval for non structural applications in cracked and non cracked concrete
- Installation prior to the material to be fixed.
- Bolt can be disassembled so that the surface of the base material is smooth
- Bolt not included

APPLICATIONS

- Fixing suspended ceilings, sprinklers and ventilation systems
- Structural fixing, inner and outer ironworks.
- Fixing threaded bars

(*) Bolt length to be threaded (not included) = e + washer thickness + thickness of material to be fixed.

Critical distances are those in which the anchors in a group do not affect each other when taking into account resistance loads. However, minimum distances between anchors must be observed.

4. INSTALLATION PROCEDURE

1. DRILL

Check the concrete base is well compacted and porosity insignificant.
Dry and wet drills allowed
Drill at hammer or percussion position
Respect specified diameter and depth.

2. BLOW AND CLEAN

Clean hole from dust and drill debris.
Use air pump and brush

3. INSTALLATION

Introduce the anchor in the hole completely. Use hammer if necessary. The anchor must not stand out of the surface of the base material.

4. EXPAND ANCHOR

Insert the expansion tool into the inner cone of the anchor. Hammer until the setting tool is level with the anchor

 Revision: **10**

 Page: **4 of 5**

5. APPLY NOMINAL TORQUE

Put the material to be fixed inserting the bolt or stud through holes. Use a bolt with the correct length. Wide washers are recommended (DIN 9021).

Do not introduce any materials between the material to be fixed and the washer (sealants, etc.). Apply the nominal torque using dynamometric wrench.

5. RESISTANCE

Characteristic resistance in non cracked concrete C20/25 for an isolated anchor (no spacing and edge distance effects) with bolt class 6.8 or A4-70.

It is recommended an increasing coefficient of loads of $\gamma_F = 1,4$

Calculation example:

Fixing a tension load of 400 kg (=3.92 kN) in non cracked concrete C30/37 with HEHOM10 anchor and bolt class 6.8

Checking: Design load < Design resistance

Design load = service load * increasing coefficient for loads = $3,92 * 1,4 = 5,49$ kN

Design resistance = Characteristic resistance * Concrete coefficient / Tension partial safety factor = $12,7 * 1,15 / 2,1 = 6,95$ kN

Checking: 5.49 kN < 6,95 kN: fixing is safe

For more complex calculations you can use our anchor calculation programme INDEXcal.

6. DOCUMENTATION

You can obtain the following documents by means of our commercial department or our web page www.indexfix.com :

- European assessments:
 - ETA-14/0135 for non cracked concrete according to ETAG 001 guide, option 7, from M6 to M20
 - ETA 14/0068 for use in concrete in non structural applications according to ETAG 001 part 6, from M6 to M20
- 1219-CPR-0078 y 1219-CPR-0079 certificates of performance
- DoP HEHO-en declaration of performance
- INDEXcal.anchor calculation programme
